

APPENDIX A

"Marked Up" paragraph showing the changes that the accompanying submission makes to the specification of Serial No. 09/802,114:

The paragraph beginning at page 4, line 15 is amended as follows::

The search engine 140 can be configured as one or more clusters of symmetric multi-processors (P) 142, for example, [Digital Equipment] Compaq Computer Corporation ALPHA processors, memories (M) 144, disk storage devices 146, and network interfaces 148 are connected to each other by high speed communications buses 143. Although, the ALPHA processors 142 are 64 bit RISC processors, the search engine 140 can be any type of processor, which has sufficient processing power and memories, including 32 bit CISC processors. For smaller collections of information, the search engine can be run on the computer storing the database.
